

ANSI/UL 2900 CYBER SECURITY ASSESSMENTS

DEFINING AND EXECUTING YOUR SECURITY ROADMAP TO ANSI/UL 2900

As a total quality assurance provider for devices, software, and cyber security, Intertek partners with you to navigate ANSI/UL 2900 with confidence.

About ANSI/UL 2900

ANSI/UL 2900 is a series of standards providing measurable criteria for the testing of network-connected (interconnected) devices sending, storing, or transmitting data to and from other network-enabled devices, to mitigate potential security vulnerabilities and exploits. These solutions will help manufacturers of network-connected devices across multiple industries—including lighting, appliances, medical devices, HVACR, wireless and mobile—produce secure products.

As a total quality assurance provider for devices, software, and cyber security, Intertek works with you to determine the solution that best works for you, your product, and your customers within the connected world.

Advisory Services

Understand products, security concerns, and develop a roadmap for evaluations and assessments.

Intertek's advisory services for ANSI/UL 2900 can help. Together, we'll work to understand your product, primary security

concerns, and develop a roadmap to ANSI/UL 2900 evaluations or certifying to FIPS 140-2 and Common Criteria.

Initial Gap Analysis

Identify potential vulnerabilities to be addressed prior to the full ANSI/UL 2900 evaluation process.

This assessment will identify the degree to which your product currently satisfies both the functional security requirements and supporting risk-based security design and implementation decisions recorded in documentation as required by the ANSI/UL 2900 standards. The outcome of the gap analysis will be a set of recommendations for closing the gaps should you decide to proceed with certification of the product.

ANSI/UL 2900 Full Evaluation

A complete testing of a product to the full scope of the standards, to help ensure that a device meets present industry requirements for cyber security.

Our team of industry experts will test your product to the full scope of ANSI/UL 2900, ensuring your device meets the present industry-standards for cyber security. Depending on your device and application,

we test to UL 2900-1, UL 2900-2-1, UL 2900-2-2, and UL 2900-2-3.

About Intertek

For more than 20 years, Intertek has been a leader in software testing and quality assurance, providing a full spectrum of services for websites, desktop and mobile devices. With the advent of IoT, Intertek has leveraged its software expertise, along with other testing services for performance, security and certifications, to bring extensive industry knowledge to markets poised to capitalize on adding connectivity to their products.
