

**Annual Unlisted component testing information**

Thank you for choosing Intertek as your business partner. This is to provide a summarised update of the annual procedure related to testing of unlisted components.

As part of our certification requirement, components can be accepted (to be used in ETL listed products) even though a component is not separately listed or certified. The unlisted component was evaluated by the engineers when the testing and evaluation of your ETL listed product was done.

However in order to verify continually compliance annual unlisted component testing is required due to that unlisted components are uncontrolled and they do not fall under a third party follow up program.

The Listing Constructional Data Report (CDR) specifies those components that are identified as unlisted and need to be sent to us for annual testing. Please refer to clause 10.1 and 5.0 in the CDR for additional information.

We kindly ask for your cooperation to set up a procedure in order to secure that the components are sent to the Component Evaluation Center (CEC) annually. Please refer to clause 10.1 in the CDR for contact details.

Intertek

Kind regards

Intertek
